

Colegio Andino's objectives until school year 2024-25

1. Teaching will develop in such a way that the students will attain B2/C2 linguistic competences in German and English and outstanding results in the SABER and *Abitur* tests, so that Andino can belong to the upper third of comparable schools in the country and in DAS.
2. School will boost the digital competences acquired during pandemic by students, teachers of every department and administrative staff, so that they develop systematically, and teaching based on communication media (in-person, virtual or hybrid teaching) will be always a part of daily school life.
3. Students will receive individual support that will enable them to make the most of their potential for academic performance and to develop their social and personal abilities.
4. The "corporate identity" of school will be increased and consolidated in such a way that all the members of the school community will be highly satisfied.
5. Colegio Andino will work on improving and consolidating an "environmental school" so that this awareness can be visible in students, teachers and administrative staff during the daily school life.
